

# DARX Series Instructions

## FM-PPM 6&8 Channel Dual Conversion Universal Receiver

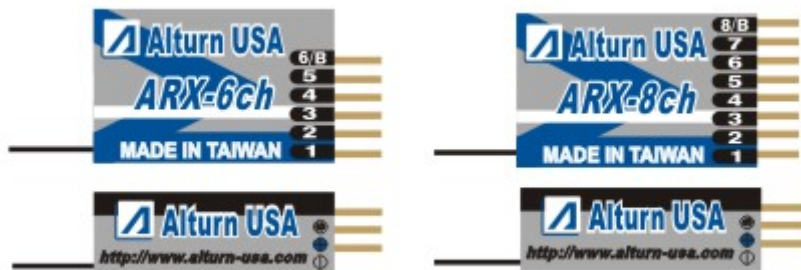

Please read these instructions carefully for the safe operation, and best performance from your ARX Receiver instruction before flying.

### PRECAUTIONS

1. please make sure transmitter range within 1 meter & press receiver side scan bottom to measure frequency.
2. Check the polarity and integrity of connections, when plugging servo connectors into your receiver.
3. You will not do any damage to your equipment if the plugs are inserted backwards, the servo will just not work, reverse the plug for proper operation.
4. Always turn on the transmitter power first, before you turn on the receiver battery, when you turn the system off, always turn the receiver off first, and then the transmitter.
5. Always do a range check of your equipment, as plug one step of transmitter antenna and walk around 70 ~ 100m at least for check until servo jittering.
6. Never use a receiver that has been in a crash without having it checked first by a qualified radio service facility.

### INSTALLATION AND OPERATION

1. **RX Installation:** To protect the receiver we strongly recommend you to wrap it in vibration absorbing foam, ensure that your receiver is adequately protected from moisture and liquids. Install your receiver in the model and fix it securely.
2. **Receiver Antenna:** Do not alter the length of antenna (100cm/39in) or coil it up as range will be reduced, always carry out a range check prior to flight, always ensure the receiver antenna is positioned securely and safely in your model.
3. **Connections Positive/Negative as below CAD**

## **Contact & Warranty Info**

The Alturn USA company is cover warranty for in year from date of purchase to be free from manufacturing and component defect, this warranty doesn't cover abuse, beglect, or damage due to incorrect wiring, over voltage, or overloading, if you have any question or got any problems, or wish to repair or replacement that you can contact ours support tem directly:
